

BevTrac's experience in the fields of wine microbiology and sanitation in a winery setting has resulted in our ability to offer comprehensive reviews of your facility to troubleshoot and remedy microbiological concerns. BevTrac is the only company in the industry to offer such robust microbiological troubleshooting and remediation options.

Solutions may include:

- On-site assessment of your facility to identify potential sources of microbiological contamination
- Custom process flow maps that incorporate a methodical evaluation of winemaking practices and procedures in relationship to microbiological risk
- Development and implementation of a microbiological management program to include:
 - Baseline assessment of current lots
 - Routine monitoring of wine
 - Trending of data
 - Implementation of control limits and remedial actions
