

**2,4,6-Trichloroanisole (TCA)
2,4,6-Tribromoanisole (TBA)
Assessments & Remediation**

BevTrac's extensive knowledge of 2,4,6-trichloroanisole (TCA) and 2,4,6-tribromoanisole (TBA) remediation in conjunction with our unique ability to conduct thorough on-site assessments result in unmatched ability to develop and implement comprehensive solutions to significantly reduce and even eliminate TCA/TBA contamination.

Our proven solutions may include:

- Development of sampling plans to identify possible sources of TCA/TBA based on thorough on-site assessments of the unique risks at each facility.
- Rigorous facility assessments to identify levels of TCA and TBA taint present.
- Development and implementation of comprehensive action plans to significantly reduce or even eliminate TCA/TBA taint.
- Development and implementation of follow-up sampling plans and assessments to verify reduction/elimination of TCA/TBA taint.
- Development and implementation of a long-term TCA/TBA management program.
- TCA/TBA education and training.
